

Dear testers,

I would like to sincerely thank you for the opportunity to participate in this test. However, I feel obliged to inform you that, due to the death of a very close relative, I was not able to implement some key features, such as user authentication using JWT or OAuth 2.0.

I also recognize that there are several aspects that can be improved, not only in the visual design of the application, but also in more advanced features, such as the incorporation of more robust conditionals in class fields, improvements in the overall architecture of the project, and database optimization.

My main focus was to lay a solid foundation that allows the implementation and improvement of these features in the future, leaving open the possibility of continuing to develop and refine the system.

I greatly appreciate your understanding and look forward to any comments or suggestions you may have.

Sincerely,

Anderson Méndez Marín
